RECENT ADVANCES in EDUCATIONAL TECHNOLOGIES and EDUCATION

Proceedings of the 2014 International Conference on Educational Technologies and Education (ETE 2014)

Interlaken, Switzerland
February 22-24, 2014
Organizing Committee

General Chairs (EDITORS)
- Professor Philippe Dondon
  ENSEIRB
  Rue A Schweitzer 33400 Talence
  France
- Professor Imre Rudas, Obuda University, Budapest, Hungary
- Professor Yuriy S. Shmaliy
  (IEEE Fellow)
  The University of Guanajuato, Mexico

Senior Program Chair
- Professor Constantin Udriste,
  University Politehnica of Bucharest
  Romania

Program Chairs
- Professor Filippo Neri
  Dipartimento di Informatica e Sistemistica
  University of Naples "Federico II"
  Naples, Italy
- Professor Zoran Bojkovic,
  Univ. of Belgrade, Serbia
- Professor Sandra Sendra
  Instituto de Inv. para la Gestión Integrada de Zonas Costeras (IGIC)
  Universidad Politécnica de Valencia
  Spain

Tutorials Chair
- Professor Kamisetty Rao (Fellow IEEE)
  Univ. of Texas at Arlington
  USA

Special Session Chair
- Professor Alexander Zemliak
  Puebla Autonomous University,
  Mexico
Workshops Chair
• Professor Ryszard S. Choras
  Institute of Telecommunications
  University of Technology & Life Sciences
  Bydgoszcz, Poland

Local Organizing Chair
• Professor Klimis Ntalianis,
  Tech. Educ. Inst. of Athens (TEI),
  Athens, Greece

Publication Chair
• Professor Maurice Margenstern,
  Université de Lorraine,
  France

Steering Committee
• Professor Aida Bulucea, University of Craiova, Romania
• Professor Dana Simian, Univ. of Sibiu, Sibiu, Romania
• Professor Zoran Bojkovic, Univ. of Belgrade, Serbia
• Professor Kleanthis Psarris, The City University of New York, USA
• Professor F. V. Topalis, Nat. Tech. Univ. of Athens, Greece
• Professor Imre Rudas, Obuda University, Budapest, Hungary

Program Committee
Prof. Lotfi Zadeh (IEEE Fellow, University of Berkeley, USA)
Prof. Leon Chua (IEEE Fellow, University of Berkeley, USA)
Prof. Michio Sugeno (RIKEN Brain Science Institute (RIKEN BSI), Japan)
Prof. Dimitri Bertsekas (IEEE Fellow, MIT, USA)
Prof. Demetri Terzopoulos (IEEE Fellow, ACM Fellow, UCLA, USA)
Prof. Georgios B. Giannakis (IEEE Fellow, University of Minnesota, USA)
Prof. George Vachtsevanos (Georgia Institute of Technology, USA)
Prof. Abraham Bers (IEEE Fellow, MIT, USA)
Prof. Brian Barsky (IEEE Fellow, University of Berkeley, USA)
Prof. Aggelos Katsaggelos (IEEE Fellow, Northwestern University, USA)
Prof. Josef Sifakis (Turing Award 2007, CNRS/Verimag, France)
Prof. Hisashi Kobayashi (Princeton University, USA)
Prof. Kinshuk (Fellow IEEE, Massey Univ. New Zeland),
Prof. Leonid Kazovsky (Stanford University, USA)
Prof. Narsingh Deo (IEEE Fellow, ACM Fellow, University of Central Florida, USA)
Prof. Kamisetty Rao (Fellow IEEE, Univ. of Texas at Arlington,USA)
Prof. Anastassios Venetsanopoulos (Fellow IEEE, University of Toronto, Canada)
Prof. Steven Collicott (Purdue University, West Lafayette, IN, USA)
Prof. Nikolaos Paragios (Ecole Centrale Paris, France)
Prof. Nikolaos G. Bourbakis (IEEE Fellow, Wright State University, USA)
Prof. Stamatios Kartalopoulos (IEEE Fellow, University of Oklahoma, USA)
Prof. Irwin Sandberg (IEEE Fellow, University of Texas at Austin, USA),
Prof. Michael Sebek (IEEE Fellow, Czech Technical University in Prague, Czech Republic)
Prof. Hashem Akbari (University of California, Berkeley, USA)
Prof. Yuriy S. Shmaily, (IEEE Fellow, The University of Guanajuato, Mexico)
Prof. Lei Xu (IEEE Fellow, Chinese University of Hong Kong, Hong Kong)
Prof. Paul E. Dimotakis (California Institute of Technology Pasadena, USA)
Prof. Martin Pelikan (UMSL, USA)
Additional Reviewers

Matthias Buyle Artesis Hogeschool Antwerpen, Belgium
Lesley Farmer California State University Long Beach, CA, USA
Deolinda Rasteiro Coimbra Institute of Engineering, Portugal

# Table of Contents

**Plenary Lecture 1: Discrete Lyapunov Controllers for an Actuator in Camless Engines**  
Paolo Mercorelli  
13

**Plenary Lecture 2: EMG-Analysis for Intelligent Robotic based Rehabilitation**  
Thomas Schrader  
14

**Plenary Lecture 3: Atmospheric Boundary Layer Effects on Aerodynamics of NREL Phase VI Windturbine in Parked Condition**  
Mohammad Moshfeghi  
15

**Plenary Lecture 4: Laminar and Turbulent Simulations of Several TVD Schemes in Two-Dimensions**  
Edisson S. G. Maciel  
16

**Plenary Lecture 5: The Flocking Based and GPU Accelerated Internet Traffic Classification**  
Zhiguang Xu  
18

**Plenary Lecture 6: The State of Civil Political Culture among Youth: Goals and Results of Education**  
Irina Dolinina  
19

**Methodology and Measurement System for Higher Education Service Quality Estimation**  
H. V. Shauchenka, U. Bleimann, M. Knoll, N. L. Clarke  
21

**Learning Control Network Programming with the Bouquet Cloud Compiler**  
Kostadin Kratchanov, Buket Yüksel, Tzanko Golemanov, Emilia Golemanova  
29

**APH-IGP: Gestalt Theory, Hybrid Design and Self-Learning with Compass**  
R. Hussin, A. Mokhtar  
37

**Sample and Summary of Audit Data of Mathematics Teacher Training in Russia**  
E. I. Smirnov, V. V. Afanasev  
42

**Significance of Software Models in Estimation of State of Nutrition in Pre-School Children**  
Momčilo Pelemiš, Dragan Martinović, Vladan Pelemiš, Nebojša Mitrović, Danimir Mandic  
48

**ICT as a Motivational Tool in the Learning of Foreign Languages**  
Blanka Frydrychova Klimova, Petra Poulova  
53

**The State of Civil Political Culture among Youth: Goals and Results of Education**  
I. Dolinina  
57

**Computer Supported Changes in Education**  
Danimir Mandic, Ezzadeen Kamuka, Nenad Lalic, Mirko Dejic, Dusko Parezanovic  
61
Experiential Learning and Pro-Environmental Behavior
Ding Hooi Ting, Fang Chin Cheng

Towards an Adaptive e-Learning System Based on Individualized Paths in a Competency-Based Approach
Meriem Hnida, Mohammed Khalidi Idrissi, Samir Bennani

Next Generation of Internet Collaborative Environments
Matija Pipan, Dušan Gabrijelčič, Julija Lapuh Bele

Mini-Conference Model for Undergraduate Courses - A Roadmap to International Publications
Amala Rajan, Vishwesh Akre, Nasser Nassiri

The Assessment of Learning Outcomes in Chemical Engineering Education: A Case Study from Saudi Arabia
Ahmed Abasaeed, Abdullah Alsadaawi, Saeed Al-Zahrani, Abdelhamid Ajbar

A Hybrid Model of Painting: Pictorial Representation of Visuospatial Attention through an Eye Tracking Research
S. A. Al-Maqtari, R. O. Basaree, R. Legino

A Tutorial Based Learning Model (TBL) for Engineering Students: The Best They Can Get
Bhawani Shankar Chowdhry, Syed M. Zafi S. Shah, Syed M. Z. Abbas Shah

Plenary Lecture 1

Discrete Lyapunov Controllers for an Actuator in Camless Engines

Professor Paolo Mercorelli
Leuphana University of Lueneburg
Germany
E-mail: mercorelli@uni.leuphana.de

Abstract: This paper deals with a hybrid actuator composed by a piezo and a hydraulic part controlled using two cascade Lyapunov controllers for camless engine motor applications. The idea is to use the advantages of both, the high precision of the piezo and the force of the hydraulic part. In fact, piezoelectric actuators (PEAs) are commonly used for precision positionings, despite PEAs present nonlinearities, such as hysteresis, saturations, and creep. In the control problem such nonlinearities must be taken into account. In this paper the Preisach dynamic model with the above mentioned nonlinearities is considered together with cascade controllers which are Lyapunov based. The sampled control laws are derived using the well known Backward Euler method. An analysis of the Backward and Forward Euler method is also presented. In particular, the hysteresis effect is considered and a model with a switching function is used also for the controller design. Simulations with real data are shown.

Brief Biography of the Speaker: Paolo Mercorelli received the (Laurea) M.S. degree in Electronic Engineering from the University of Florence, Florence, Italy, in 1992, and the Ph.D. degree in Systems Engineering from the University of Bologna, Bologna, Italy, in 1998. In 1997, he was a Visiting Researcher for one year in the Department of Mechanical and Environmental Engineering, University of California, Santa Barbara, USA. From 1998 to 2001, he was a Postdoctoral Researcher with Asea Brown Boveri, Heidelberg, Germany. From 2002 to 2005, he was a Senior Researcher with the Institute of Automation and Informatics, Wernigerode, Germany, where he was the Leader of the Control Group. From 2005 to 2011, he was an Associate Professor of Process Informatics with Ostfalia University of Applied Sciences, Wolfsburg, Germany. In 2010 he received the call from the German University in Cairo (Egypt) for a Full Professorship (Chair) in Mechatronics which he declined. In 2011 he was a Visiting Professor at Villanova University, Philadelphia, USA. Since 2012 he has been a Full Professor (Chair) of Control and Drive Systems at the Institute of Product and Process Innovation, Leuphana University of Lueneburg, Lueneburg, Germany.

Research interests: His current research interests include mechatronics, automatic control, signal processing, wavelets; sensorless control; Kalman filter, camless control, knock control, lambda control, robotics.

The full paper of this lecture can be found on page 19 of the Proceedings of the 2014 International Conference on Circuits, Systems and Control, as well as in the CD-ROM proceedings.
Plenary Lecture 2

EMG-Analysis for Intelligent Robotic based Rehabilitation

Professor Thomas Schrader
University of Applied Sciences Brandenburg
Germany
E-mail: thomas.schrader@computer.org

Abstract: The establishment of wireless sensor network (WSN) technology in physiotherapy and rehabilitation is a clue for improvement of the therapeutic process, quality assessment and development of supporting technologies such as robotics. Especially for complex therapeutic interventions such as sensorimotor training, a continuous monitoring during the therapy as well as for all sessions would be quite useful. For the usage of robotic support in rehabilitation various input information about the status of patient and his/her activity status of various muscles have to be detected and evaluated. The critical point for robotic intervention is the response time. Under physiotherapeutic and rehabilitation conditions, the robotic device should be able to react differently and in various patterns. A complex analysis procedure of input signals such as EMG is essential to ensure an effective response of the robot. However sensor nodes in a wireless (body) area network have limited resources for calculating and storage processes. A stepwise procedure with distributed analysis tasks is proposed. Electromyogram (EMG) measurements of eight muscles were collected and evaluated in an experimental setting of a sensorimotor training using different types of balance boards. Fast and easy methods for detection of activity and rest states based on time domain analysis using low pass IIR filter und dynamic threshold adaptation. These procedures can be done on the sensor nodes themselves or special calculation nodes in the network. More advanced methods in frequency domain or analysis of dynamical system behavior request much more system power in calculation as well as storage. These tasks could be done on the level of mobile devices such as mobile phones or tablet computer. A broad range of resources can be provided by cloud/internet. Such level based organization of analysis and system control can be compared with biological systems such as human nervous system.
Plenary Lecture 3

Atmospheric Boundary Layer Effects on Aerodynamics of NREL Phase VI Wind Turbine in Parked Condition

Professor Mohammad Moshfeghi
Sogang University, South Korea
E-mail: mmoshfeghi@sogang.ac.kr

Abstract: In a natural condition, the wind is affected by the groundcover and the type of terrains which impose vertical velocity profile to the wind. This wind profile, which is also called atmospheric boundary layer (ABL), dramatically influences the aerodynamic behaviors and loadings of horizontal axis wind turbines. However, for the sake of simplicity, many numerical simulations only deal with the uniform wind speed. To consider the effects of the ABL, numerical simulations of the two-bladed NREL Phase VI wind turbines aerodynamic at the parked condition are conducted under both uniform and ABL. The Deaves-Harris (DH) model is applied to the ABL. The wind turbine blades are kept at the six o’clock position and are considered at two different pitch angles. The aerodynamic forces and moments of the uniform the DH model are compared. The results show that the pitch angle at which the HAWT is parked plays an important role on the blade loading. Also it is observed that for the fully separated conditions, the Down-blade and the blade in the uniform wind are under approximately similar aerodynamic loadings, while the Up-blade encounters more aerodynamic loads, which is even noticeable value for this small wind turbine. This in turn means that for an appropriate and exact design, effects of ABL should be considered with more care.

Brief Biography of the Speaker: Dr. Mohammad Moshfeghi works in Multi-phenomena CFD Engineering Research Center (ERC) Sogang University, Seoul, South Korea. He is also Lecturer in Qazvin Azad University. He has a registered patent: "Split-Blade For Horizontal Axis Wind Turbines" (Inventors: Mohammad Moshfeghi, Nahmkeon Hur).
Plenary Lecture 4

Laminar and Turbulent Simulations of Several TVD Schemes in Two-Dimensions

Professor Edisson S. G. Maciel
Federal University of Great Dourados, Brazil
E-mail: edisavio@edissonsavio.eng.br

Abstract: This work, first part of this study, describes five numerical tools to perform perfect gas simulations of the laminar and turbulent viscous flow in two-dimensions. The Van Leer, Harten, Frink, Parikh and Pirzadeh, Liou and Steffen Jr. and Radespiel and Kroll schemes, in their first- and second-order versions, are implemented to accomplish the numerical simulations. The Navier-Stokes equations, on a finite volume context and employing structured spatial discretization, are applied to solve the supersonic flow along a ramp in two-dimensions. Three turbulence models are applied to close the system, namely: Cebeci and Smith, Baldwin and Lomax and Sparlat and Allmaras. On the one hand, the second-order version of the Van Leer, Frink, Parikh and Pirzadeh, Liou and Sreffen Jr., and Radespiel and Kroll schemes is obtained from a “MUSCL” extrapolation procedure, whereas on the other hand, the second order version of the Harten scheme is obtained from the modified flux function approach. The convergence process is accelerated to the steady state condition through a spatially variable time step procedure, which has proved effective gains in terms of computational acceleration (see Maciel). The results have shown that, with the exception of the Harten scheme, all other schemes have yielded the best result in terms of the prediction of the shock angle at the ramp. Moreover, the wall pressure distribution is also better predicted by the Van Leer scheme. This work treats the laminar first- and second-order and the Cebeci and Smith second-order results obtained by the five schemes.

Brief Biography of the Speaker: Professor Edisson Sávio de Góes Maciel was born in Recife, Pernambuco, Brazil in 1969, February, 25. He studied in Pernambuco until obtains his Master degree in Thermal Engineering, in 1996, August. With the desire of study aerospace and aeronautical problems using numerical methods as tools, he obtains his Doctor degree in Aeronautical Engineering, in 2002, December, in ITA and his Post-Doctor degree in Aerospace Engineering, in 2009, July, also in ITA. He is currently Professor at UFGD (Federal University of Great Dourados) – Mato Grosso do Sul – Brasil. He is author in 47 papers in international journals, 2 books, 67 papers in international conference proceedings. His research interests includes a) Applications of the Euler equations to solve inviscid perfect gas 2D and 3D flows (Structured and unstructured discretizations) b) Applications of the Navier-Stokes equations to solve viscous perfect gas 2D and 3D flows (Structured and unstructured discretizations) c) Applications of the Euler and Navier-Stokes to solve magneto gas dynamics flows 2D and 3D; (Structured and unstructured discretizations) d) Applications of algebraic, one-equation, and two-equations turbulence models to predict turbulent effects in viscous 2D flows (Structured and unstructured discretizations), e) Study of artificial dissipation models to centered schemes.
in 2D and 3D spaces (Structured and unstructures discretizations) f)Applications of the Euler and Navier-Stokes equations to solve reentry flows in the Earth atmosphere and entry flows in Mars atmosphere in 2D and 3D (Structured and unstructured discretizations).

The full paper of this lecture can be found on page 79 of the Proceedings of the 2014 International Conference on Mechanics, Fluid Mechanics, Heat and Mass Transfer, as well as in the CD-ROM proceedings.
Plenary Lecture 5

The Flocking Based and GPU Accelerated Internet Traffic Classification

Professor Zhiguang Xu
Valdosta State University
USA
E-mail: zxu@valdosta.edu

Abstract: Mainstream attentions have been brought to the issue of Internet traffic classification due to its political, economic, and legal impacts on appropriate use, pricing, and management of the Internet. Nowadays, both the research and operational communities prefer to classify network traffic through approaches that are based on the statistics of traffic flow features due to their high accuracy and improved robustness. However, these approaches are faced with two main challenges: identify key flow features that capture fundamental characteristics of different types of traffic in an unsupervised way; and complete the task of traffic classification with acceptable time and space costs. In this paper, we address these challenges using a biologically inspired computational model that imitates the flocking behavior of social animals (e.g. birds) and implement it in the form of parallel programs on the Graphics Processing Unit (GPU) based platform of CUDA from NVIDIA™. The experimental results demonstrate that our flocking model accelerated by GPU can not only effectively select and prioritize key flow features to classify both well-known and unseen network traffic into different categories, but also get the job done significantly faster than its traditional CPU-based counterparts due to the high magnitude of parallelism that it exhibits.

Brief Biography of the Speaker: Prof. Zhiguang Xu received his Ph.D. in Computer Science from University of Central Florida, FL, USA in 2001. He is currently Professor of Computer Science in the Department of Math and Computer Science at Valdosta State University, GA, USA. His research and teaching interests include Computer Networking, Artificial Intelligence, Parallel and Distributed Computing, and Computer Science Education. Professor Xu is author or co-author of more than 25 published papers in refereed journals or conference proceedings. He has been awarded many grants from both academic and industrial entities. He is actively serving as committee member, reviewer, or lecturer of many national and international conferences and organizations.

The full paper of this lecture can be found on page 88 of the Proceedings of the 2014 International Conference on Mathematical Methods, Mathematical Models and Simulation in Science and Engineering, as well as in the CD-ROM proceedings.
Plenary Lecture 6

The State of Civil Political Culture among Youth: Goals and Results of Education

Professor Irina Dolinina
Perm National Research University, Russia
E-mail: irina_edu@mail.ru

Abstract: Political culture is viewed as a phenomenon of social reality. Attitudes toward it (its meaning or significance) are historically conditioned. This research studies enduring presuppositions about (dispositions toward) society and the state, and how these are reflected in conscious stereotypes and cognitive structures among young people within the sociocultural mechanisms that form and modify the basic characteristics of political culture.

Brief Biography of the Speaker: Prof. Irina Dolinina was born in 1960, in Perm, Russia. She is Team Leader in the Research Project «Formation of the political culture of the students», and Professor of Philosophy and Law of the Faculty of Humanities, Perm National Research Technical University since 2012. She has received a lot of honors and awards (2012 - Diploma of the All-Russian Roswitha fund national education and the Education Committee of the State Duma of the Federal Assembly of the Russian Federation. 2013 - Diploma of the All-Russian Roswitha fund national education and the Education Committee of the State Duma of the Federal Assembly of the Russian Federation. Diploma-Russian contest "Best Science Book in the humanitarian sphere - 2013). Prof. Dolinina has various professional organizations and activities.
(Expert on the legislative activities of the Council of Federation of Russia. Board member of the Interregional Association "For civic education." Director of the Research Centre of the political culture).

The full paper of this lecture can be found on page 57 of the present volume, as well as in the CD-ROM proceedings.
